Cal-OSHA Workplace Accident, Complaints and Safety Inspections

The Division of Occupational Safety and Health (DOSH) regularly conducts inspections of public and private workplaces as a result of accidents, in response to complaints, and on a planned or proactive basis. All of these inspections and regular updates are entered into the Federal IMIS database system. Because this is a comprehensive system, public access is granted to all inspection records for public and private work locations.

Public access to this database is available allowing anyone to search by a number of various criteria. Searches may be conducted by the establishment name, state, date range, or NAICS - the North American Industry Classification System (a 6-digit industry grouping system developed in cooperation with Canada and Mexico).

To search for inspections that DOSH has performed, follow the links below which will take you to the primary search page, enter you search criteria and a list of all inspections conducted that meet you criteria will be returned. To limit your search criteria to just inspections that DOSH has conducted, use the 'drop down' boxes and specify *California* under State and change the 'drop down box' from *Fed & State* to just *State*. Inspection search ranges may be specified from 1972 through the present.
